# About curasan

curasan develops, produces and markets biomaterials and medical devices for bone and tissue regeneration.

As a global technology leader in the future-oriented growth market of regenerative medicine, our company is specialized in biomimetic bone grafting materials (i.e. materials mimicking biological structures) for the use in orthopedics, traumatology, spine surgery and dental implantology.

Under the CERASORB® brand we offer an innovative product pipeline for bone and tissue regeneration. The phase purity of the beta-tricalcium phosphate used in CERASORB® is considered the global reference standard\* in the market. Numerous product forms, ranging from granules and pastes to tailor-made block forms and moldable collagen sponges, give surgeons and implantologists maximum flexibility.

Other areas of application in our product range include innovative products for wound healing and osteoarthritis therapy. Our products are the products of choice for orthopedic, trauma and spine surgeons, sports medicine specialists, implantologists, oral and maxillofacial surgeons and specialists in dental surgery.
